

Max CLA

with CLA One[®]
Patented

Conjugated Linoleic Acid

Lose Body Fat - Increase Definition[†]

MAX CLA[™] is a scientific breakthrough for losing fat and building muscle. CLA is a special type of omega-6 (Linoleic Acid) fatty acid that has been researched for weight management and preservation of muscle mass. CLA is naturally found in beef, whole milk, eggs, butter, yogurt, and many cheeses, but due to low fat diets people eat fewer CLA rich foods. One of the best ways to get your CLA is through **MAX CLA**[™], but not all CLA products are created equal.[†]

MAX CLA[™] uses only patented CLA One[®] from specially modified Safflower Oil to provide the highest levels of the two active CLA isomers cis-9, trans-11 (c9-t11), and trans-10, cis-12 (t10-c12). There are several different CLA isomers, but these two are the only ones that have been research tested for body composition changes. These isomers are so special that they are protected by the WARF (Wisconsin Alumni Research Foundation) Patents and only a few companies have the rights to produce this superior CLA and make claims related to this special form of CLA. Max Muscle Sports Nutrition has secured the rights and **MAX CLA**[™] delivers the goods![†]

Fights Fat Three Ways![†]

First **MAX CLA**[™] supports the stimulation and breakdown of stored body fat (lipolysis). Second, **MAX CLA**[™] supports the inhibition of the enzyme lipoprotein lipase (LPL) blocking the transfer of fat into fat cells. Finally, **MAX CLA**[™] supports an increase in the activity of the muscle enzyme carnitine palmitoyl transferase (CPT) responsible for the transport of fat into the mitochondria where it can be burned for energy (beta-oxidation). Studies show superior loss of body fat and increase in lean muscle mass for people taking 3 – 6 grams of CLA per day compared to placebo.[†]

By combining **MAX CLA**[™] with a sound diet and exercise program you can decrease fat deposition, increase fat breakdown and burning, build muscle, and improve strength. **MAX CLA**[™] will be your newest weapon in the fight to build the lean, hard body you want.[†]

Size: 90 Softgels
Serving Size: 2 Softgels
Servings Per Container: 45

KEY FEATURES

- Patented Dual Isomer Formula
- Decrease Fat Accumulation
- Increase Lean Muscle
- Increase Fat Burning

KEY MESSAGES

- Max CLA is a special type of omega-6 fatty acid researched for weight management and muscle mass preservation.
- Max CLA uses patented CLA One, specially modified Safflower Oil provides the highest levels of the two active CLA isomers, cis-9, trans-11 and trans-10, cis-12.
- Only CLA research tested for body composition changes.
- Superior form of CLA protected by the WARF Patents.
- Supports the stimulation and breakdown of stored body fat.
- Supports inhibition of lipoprotein lipase blocking the transfer of fat into fat cells.
- Supports increase in muscle enzyme carnitine palmitoyl transferase responsible for transport of fat into mitochondria.
- 3-6 grams per day shows superior loss of body fat and increase in lean muscle.

TARGET MARKET

Primary: Individuals looking to decrease fat deposition, increase fat breakdown and burning, build muscle and improve strength.

Secondary: Safe and effective alternative for individuals who do not want to use a thermogenic supplement for weight-loss or can be added to a thermogenic supplement program for synergistic fat loss benefits.

RECOMMENDED STACK

- High 5
- Max Glutamine
- Vit-Acell
